MYRZAN IZIMBETOV

Senior Product Designer | Complex Workflows, Data-Dense Interfaces, AI-Assisted Prototyping

London, UK | izimbetov.myrzan@gmail.com | +44 7438 868246 | Portfolio: myrzan.com | linkedin.com/in/myrzanio

PROFESSIONAL SUMMARY

Senior Product Designer with 6+ years of interaction design in product design and UX design across web and mobile, specialising in complex workflows, data-dense interfaces, AI-assisted prototyping and personalisation. Owns end-to-end design workstreams, from problem framing and user journey mapping through interactive prototypes, usability evaluations and launch, working directly with Product Managers and Software Engineers. Now designing the National Bank of Uzbekistan's front-office system. Previously shipped search, a design system and growth experiments at BI Group (2M+ monthly users), and a multi-bank credit flow at Technodom that generated $4M+ in monthly revenue.

CORE SKILLS

Interaction & UX Design: End-to-End User Journeys, User Journey Mapping, User Flows, Wireframes, High-Fidelity Mockups, Interaction Design, Information Architecture, Responsive Web, Native iOS and Android, User-Centered Design

Complex Workflows & Data-Dense Interfaces: Banking Front-Office Systems, Financial Onboarding, Credit and Lender Comparison, Identity Verification, Enterprise ERP, HSE and HR Workflows, Internal Operations Tools

Research & Validation: UX Research, Usability Evaluations, Split Tests, A/B Testing, Card Sorting, Hall Tests, UX Audits, Quantitative Product Metrics, Hypothesis Validation

Prototyping & AI: Figma, Interactive Prototyping, Claude Code, Cursor, AI-Assisted Prototyping in Production Code, HTML, CSS, Basic JavaScript

Design Systems & Collaboration: Design System Alignment, Figma Variables, Design Tokens, Storybook, WCAG 2.2, Dark Mode, Leading Design Projects, Mentoring, Cross-Functional and C-Level Stakeholder Presentations

PROFESSIONAL EXPERIENCE

Senior Product Designer | Expera, for the National Bank of Uzbekistan **Sep 2026 - Present**

Unified front-office system for the National Bank of Uzbekistan, which serves 3.3M individual clients.

- Own the interaction design for the legal-entity workstream: the complex, data-dense workflows bank managers use to open accounts, deposits and loans for business clients.
- Support the design system team and lead its move to AI-assisted prototyping: built a Storybook MCP server that connects AI tools to the production component library, so prototypes are built from real code components rather than mockups.

Product Designer | BI Group **Aug 2023 - Aug 2026**

Real-estate technology platform with 2M+ monthly users; member of the Growth team.

- Owned 12+ growth experiments per quarter from problem framing and hypothesis through design, implementation, A/B testing and post-launch measurement, working with Product Managers, Software Engineers, Analytics, SEO, call-center and sales teams.
- Redesigned mobile-first search and filtering after a UX audit, product analytics and card sorting with 8 buyers, which showed 3 filters covered 87% of use. Traded one extra tap on rare filters for faster access to the common ones; a 12-person usability evaluation showed unaided task success of 5 of 6 on the new design against 2 of 6 on the old one. After launch: page depth 1.6 to 4.1 (+156%), bounce rate 25% to 16.8%, and a 54% conversion rate through quick filters.
- Led the rebuild of a studio-created UI kit into a WCAG 2.2-aligned design system with 30+ components, 50+ semantic tokens, Figma variables, dark mode and Storybook alignment; reduced design-related engineering QA cycles by 83%.
- Built BI Match, a swipe-based home-matching experience, as a working prototype in the production codebase with Claude Code; concept to stakeholder decision in one day, now live in production. Also designed and prototyped an AI-personalised scratch-card campaign, approved the same day.
- Mapped the in-person buying journey with sales, then launched a video-consultation experiment in one week with no engineering (Calendly and Microsoft Teams); it closed a ~$100K apartment sale in the first month and led the business to assign a team to build it.

- Adapted experiences for 6 markets (Kazakhstan, UAE, Uzbekistan, USA, Azerbaijan, Ukraine) and presented design rationale and experiment outcomes at quarterly C-level demo days.

Product Designer | Beeline / VEON **Sep 2022 - Jul 2023**

Telecom and digital-services platform serving 11M+ subscribers.

- Designed end-to-end brokerage onboarding and financial-product comparison across six providers, turning regulatory, authentication and business requirements into clear user flows, including Kazakhstan government 2FA verification.
- Ran checkout research with the customer experience team: hall tests with 23 customers (86% preferred choosing the offer before delivery) and a timed usability test with 12 in which step-specific button labels, a content design change, brought average completion to 1:37 against 2:43 with a generic "Next" button.
- Owned checkout optimisation for digital products, contributing to a 17.5% conversion uplift; mentored junior designers and contributed to design reviews.

Product Designer | Petrel AI **Feb 2022 - Sep 2022**

Software consulting company; embedded with enterprise client teams.

- Designed enterprise HSE and HR applications for a national atomic-industry company that reduced manual operational processes by 40%, working directly with C-level and operational stakeholders.
- Created modular enterprise interfaces and a reusable ERP design system spanning multiple product areas, and guided implementation with engineering.

Product Designer | Technodom **Dec 2020 - Jan 2022**

Kazakhstan's largest electronics retailer, with an omnichannel e-commerce and FinTech platform.

- Fixed a credit rejection loop at its root: designed a multi-bank pre-scoring flow that sends a customer's National ID to six banks at once and shows every approval and rejection in one interface, instead of one bank at a time.
- Designed the full journey across identity verification, government 2FA, pre-scoring, lender comparison, decision states, edge cases and payment, and worked with engineers to integrate partner banks' pre-scoring APIs and fallback flows; increased credit conversions by 35% and generated $4M+ in monthly revenue, making online credit the company's #1 revenue stream.
- Designed native iOS and Android experiences (Apple HIG, Material Design) and internal logistics and warehouse interfaces that cut processing time by 45%.

Product Designer | Vlife **Apr 2020 - Dec 2020**

- Designed an end-to-end service-booking CMS and consumer scheduling experience across iOS and Android, plus Lottie and After Effects interactions.

EDUCATION

BS, Computer Science | Almaty University of Power Engineering & Telecommunications | 2022

SELECTED CASE STUDIES

At myrzan.com: BI Group Mobile Search, Technodom Multi-Bank Credit, BI Group Video Consultation, BI Match (AI-assisted prototyping), plus design system and research case studies.
